=====
emacs :
  In version 19.26 or later of GNU emacs you can simply set the
  environment variable LC_CTYPE to iso_8859_7 like you do for tcsh
  and elm. If you use an older version put the following in your
  /usr/lib/emacs/site-lisp/default.el file:

  (standard-display-european t)

  (set-input-mode (car (current-input-mode))
    (nth 1 (current-input-mode))
    0)

  Dead key functionality should work under GNU emacs provided you use
  GNU emacs v19.30 or higher and XFree86 v3.1.2 or higher, so don't
  start researching available elisp packages implementing "electric
  keys" or anything like that. If you want to implement European
  keyboard conventions in emacs without upgrading the best choice is
  probably the remap package available from the AUC FTP server (see
  section ``References and FTP sites'').

ispell - Spell checking in Danish:
    First make sure you install version 3.1 instead of version 4.0
    of ispell. The latter is obsolete and multiply brain-damaged.
    You can download the sources for ispell at the GNU archive at
    prep.ai.mit.edu, and you can get a Danish dictionary via FTP
    from ftp.iesd.auc.dk in /pub/packages/dkispell/. Follow the
    compilation instructions and you should have no trouble (One
    caveat: When defining the variables necessary for compilation
    you should slightly confusingly tell ispell that Linux is a Sys
    V type OS by defining the variable USG.)
    When you have installed the Danish dictionary for ispell you
    can check the spelling of a Danish language file by executing
    the command:

    ispell -d danish -T latin1 -w "???????" <your_danish_text_file>

    (Note for non-Danish readers: You can find dictionaries for most
    Western languages by reading the file Where included with the
    sources for ispell.)

8. Το Linux στην Ελλάδα

Οι έργοι Ελλήνων χρηστές πρέπει να είναι πλέον πάνω από χίλιους (Οκτ. 98) και έχουν σχηματιστεί ένα δίκτυο μεταξύ τους, που περιλαμβάνει κοινότητες FTP, news hosts με ομάδες συζητήσεων, IRC channels και προσωπικές σελίδες στο Internet. Τα πιο σημαντικά σημεία που πρέπει να γνωρίζετε είναι το κεντρικό ελληνικό κομμάτι www.linux.gr και τις σελίδες του νομικού αγωγισμένου συλλόγου Hellug, στην διεύθυνση www.hellug.gr. Το -περίπου μηνιαίο- περιοδικό μαγας είναι ενδιαφέρον των επιθυμιών των ελλήνων χρηστών: magaz.hellug.gr.

8.1 Listes και ομάδες συζητήσεων (Newsgroups)

Η τακτική επικοινωνία Ελλήνων για το Linux γίνεται από την **linux.greek.users**, αρχικά φτιαγμένη με πρωτοβουλία του Γιάννη Ιωάννου, στο Argea (τότε argeas.argos.hol.gr, νυν argeas.hellug.gr) και τώρα τρέχει στο μέντορά του συλλόγου, Επειδή την λίστα των διαβάζουν πολλοί, που πιθανόν δεν έχουν ελληνικά, είναι καλή τακτική να χρυσόποιοι ελληνικά:

ayta edv, as poume, einai greeklish.

Υπάρχει και list-news gateway της **linux.greek.users** στην διεύθυνση:

[news://edessa.topo.auth.gr/local/linux.greek.users](http://edessa.topo.auth.gr/local/linux.greek.users) Το gateway χρυσίμει για να συζητήσετε και να βλέπετε τα θέματα χωρίς να χρειάζεται να γράψετε. The GNU replacement for nroff, groff, has an option to generate ISO 8859-1 coded output, instead of plain ASCII. Thus, you can preview nroff documents with correctly displayed accented characters. Invoke groff with the "groff -Tlatin1" option to achieve this.

Groff is free software. It is available from URL
