

WARNING! WARNING! WARNING! Vulnerable MySQL Server On Your Server!

MySQL Server Version	Reason For Vulnerability
3.23.44-log	<p>A vulnerability has been discovered in MySQL that may cause a denial of service. It has been reported that, under certain circumstances, a malicious MySQL client may be able to trigger a condition in which MySQL attempts to free the same memory twice. MySQL Daemon can be crashed unless upgraded. Details can be found by clicking => here. Until that is resolved, PHP-Nuke should be the least of your worries.</p>
